H. M. WHITNEY'S

DEVOTED TO HAWAIIAN PROGRESS.

PUBLISHED AND EDITED BY HENRY M. WHITNEY.

WEDNESDAY, FEBRUARY 28, 1877. Moses Refuted.

The subjoined ludicrous production, from falling-leaf table, making a very convenient the New York Times, is one of the best divan. This chamber leads through a burlesques on the "scientific method" that sliding-door into the body of the carriage, have come under our notice. The hit at which consists of a spacious saloon, trimgeologists who construct elaborate theories med with maroon morocco, and enlivened on exceedingly frail suppositions might well be extended to some learned professors in mouldings with which the ceiling is adornother branches of science, who have reared ed. The furniture and fittings are satinwonderful but substantial fabrics of appar- wood, and consist of a couch, settee, arm

of their imaginations.

strack at the Mosaic account of creation by the discovery of an extremely important fossil in a coffee sack at Baltimore. In the riage and is entered from the saloon oppocenter of this sack was found the skull of site to the sliding-door leading from the a monkey. There can be no doubt as to antechamber) is fitted up with every conthe facts. The coffee was of the variety venience as a lavatory. The floor is tessecalled Rio, and the skull was perfectly pre- lated wood, and the walls are covered with served. Let us dwell for a little upon the flock paper printed two shades of green, meaning of this discovery as interpreted by | the ceili the principles of geology. The coffee sack was 12 (say 121) inches in diameter, and ed, and is carried on two bogic underframes, four feet in height. The skull, which lay with an arrangement of springs calculated in the middle of it, was therefore 2 feet be- to give the greatest possible ease in travellow the surface. To suppose that it was violently forced into the sack, after the latter was full, would be eminently unscientitic. No one imagines that the fossil birds of the Old Red Sandstone dug down into that locality through the superincumbent strata. Nothing is more universally conceded than that fossils are always found where they belong. The animals whose remains we find in the rocks of the paleozoic, the meso-Gothic, and the Syro-Phonician strata, belong, respectively, to those several systems. The fossil monkey skull was, therefore, deposited in the coffee sack when the latter was half full, and the 2 feet of coffee which rested upon it was a subsequent deposit. Now, it follows from this premise that monkeys existed during the early part of the Rio coffee period. It is the opinion of most geologists that the Rio coffee period succeeded the tertiary period, and immediately preceded the pres riod. Now, no tertiary monkeys have yet been found; but the Baltimore discovery shows that monkeys existed as early as the

middle of the Rio Coffee period, a date far earlier than any which has hitherto been assigned to them. "We are now in a position to inquire what is the least period of time which must have elapsed since the skull of the Baltimore monkey was the property of a live rate at which coffee is deposited. It is the opinion of Mr. Huxley, based upon a long and careful examination of over three hundred garbage boxes, that coffee is deposited in a ground condition at the rate of an inch in a thousand centuries, but the deposition of unground coffee is almost infinitely slower. He has placed bags, coffee-mills, and other receptacles in secluded places, and left them for mouths at a time, without finding the slightest traces of coffee in them. Although Huxley does not hazard a guess at the rate of deposition of unground Rio coffee, Professor Tyndall does not hesitate to say that it is at least as slow as the rate of deposition of tomato cans. Let us suppose, as we are abundantly justified in doing, that 30,000,000 of years would be required to bring about the deposition of a stratum of tomato cans one foot thick all over the surface of the globe and an equally long period must certainly have clapsed while a foot of unground coffee was accumulating over the skull of the Baltimore monkey. We thus ascertain that the monkey in question yielded up his particular F. T. LENEHAN & CO. variety of ghosts and became a fossil fully 30,000,000 of years ago. Probably

> geology, and of its very simplest strata, who boldly assumes to tell us all about the creation !

Pretty or Not.

To be pretty is the great object of almost

thought upon their own charms, and homely women grow homely through fretting capture is the teeth, which frequently comecause they are not handsome.

very like women in this respect, though they hide their feelings better. There is one comfort to the homely ones,

After you come to know people very in-timately, you do not know whether they are pretty or not are pretty or not.

Their "ways" make an impression on you, but not their noses and ears, their eyes and mouths. In time, the soul expresses itself to you,

and it is that which you see.

A man who has been married twenty years scarcely knows what his wife looks like.

Now as to brushing. The skin of the

love is in his heart, and he doesn't see her body brush. But it is not so easy to brush Pacific Rubber Paint Company's as she is to-day, but as she was when he the hair as one might imagine. Few hair courted her.

not know that she is the fine woman that | in the other people think her.

her success as a cook.

able and very valuable.

A Model Railway Saloon. The Great Eastern Railway, England, is

now running a new saloon, which has been built at the company's works at Stratford.

The carriage is divided into five compartments, the one at each end being for vants and luggage respectively. The former is very conveniently furnished with green Utrecht velvet seats and backs, hat nets, etc., and has a bell communication with the body of the saloon, which is approached therefrom through an antecham-ber farnished with a moroeco lounge and a ent fact solely from the "scientific (?) uses | chairs, and a folding-table, at which ten "A new and violent blow has just been floor being covered with a rich Brussels ing being relieved with gold mould-

Revue Industrielle. than the actual period which has elapsed since that monkey's decease; and we may consider ourselves safe in assigning to his say that they are apparently as numerous skull the age of 50,000,000 years, besides a few odd months.

"In the light of this amazing revelation," as ever, although very large ones are seldom seen now in this part of the State, but in the marshes and lakes on the Upper St. "In the light of this amazing revelation, what becomes of Moses and his 6,000 years? It will hardly escape notice that he nowhere mentions Rio coffee. Obviously, this omission is due to the fact that he knew nothing of it. But if he was unacquainted with one of most recent formations, how with one of most recent formations, how can we suppose that he knew anything about the elder rocks—the metamorphic and stereoscophic stratas? And yet it is their increase, a nest often containing two this man, ignorant of the plainest facts of hundred eggs, most of which hatch, and, unless destroyed by violence, a large proportion of the young are raised. A few tion of hemlock and white oak bark, and, years since the skins were in demand at from fifty cents to one dollar each, and emerged in the shape of a soft, pliable, thousands were slaughtered. Care of the Hair.

A writer in the Harper's Bazar says : To get and retain beautiful hair you must attend to daily brushing it, occasionally washing it, and periodically trimming it, and striving at all times to keep the general

He may declare that he does, and tell you head, like that of every other part of the that she is a bewitching little blonde, with body, is constantly being renewed internally, soft blue eyes, long after she is fat and red and throwing off minute scales externally, because the image of his early and these are removed by means of the dressers, indeed, know very much about it. Or, being an indifferent husband, he may The proper time for the operation then, is forning, just after you have come ther people think her.

You have known men who have married wetted your hair. Two kinds of brushes the plainest women, and think them beau-ought to be found on every lady's toi-ties: and you know beauties, who are quite let table, a hard and a soft. The former is thrown away on men who value a wife for first to be used, and used well, but not too roughly; it removes all dust, and acts like As far as one's effect on strangers is to a tonic on the roots of the hair, stimulating be taken into consideration, beauty is value the whole capillary system to healthy according to the whole capillary system to healthy according to the second to the s tion. Afterward use the soft brush-

Secondly, one word on washing the hair. This is necessary occasionally, to throughly cleanse both head and hair. One or two precautions must be taken, however. Never use soap if you can avoid it; if you do, let it be the very mildest and unper-fumed. Avoid so-called hair-eleansing

fluids, and use rain water filtered The yolks of two new-laid eggs are much to be preferred to soap; they make a beautiful lather, and when the washing is finished, and the hair thoroughly rinsed in the pare rain water, you will find when dry that the gloss will not be destroyed, which an alkali never fails to do. The first water must not be very hot, only just warm, and the last perfectly cold. Dry with soft towels—but do not rub till the skin is tender-and afterward brush. Be always careful to have your brushes and comb perfectly clean and free from grease, and place other brushes on the table for friends

f yours who happen to be Macassarites. Pointing the hair regularly not only pre vents it from splitting at the ends, but ren-ders each individual hair more healthy and less attenuated -if I may apply the term to hair—and moreover, keeps up the growing process, which otherwise might be blanted or checked. Singeing the tips of the hair has also a beneficial effect. It will be seen that I am no advocate for

oils and pomades. My advice in all cases is to do without them if you possible can, for by their clogging nature and overstimulating properties they often cause the hair to grow thin and fall off sooner than it otherwise would. Let well alone, One word in conclusion, about dves, Avoid

them if you be your own friend. Hair dyeing is very satisfactory as far as dead hair is concerned, but on the living head its per-The New York World says: The trick feet success is a chemical impossibility. As known as the "basket trick," which Mr. to hair restorers, those that are not simply stainers, but depend upon the action of the performance at the Wonder Theatre, ex-cites a great deal of surprise, as it is only application after it has been used—their incautious use, I must add, is fraught with

A Colossal Aquarium M. Toselli, whose ingenious grappling irons and other marine apparatus we possibly way by which a human being once frequently described, has devised an inin could get out of that basket without being seen. The basket placed by Mr. Heller inventions under conditions of actual use, and his assistant, Mr. Heller next brings and in connection with a mammoth aquaforward a pair of overalls which cover him rium to be erected at the Freuch Internato the neck and which have no outlet at the tion Exposition of 1878. He proposes to ends of the sleeves or legs. When the overalls are drawn on and a hood drawn over Mr. Heller's head and attached to the will be a huge tank, which will be furnishmain garment by strings, there remains no ed with rocks and marine vegetation, and outlet for so much as a finger of the per-former to get through. But as Mr. Heller kinds. On the sides of the tank are to be is about to remove his coat for the purpose inserted powerful lenses, and the annular of donning this garment he remembers that space between tank and building will be that is placed behind the basket, and the and active simian. The answer to this question must be sought by ascertaining the performer retires behind this and effects the submarine mole, a curious invention some change. So far as one notices his head what analogous to the diving bell, but does not once disappear during the time he is employed in drawing on the overalls. The last vision one has of Mr. Heller's own face is disappearing in the ample hood, and the electric light. After viewing the deimmediately he steps out from behind the scent of this apparatus from the upper gallscreen, and, with the help of his assistant, climbs into the basket, the lid of which is closed upon him and locked. As far as descent of about ten feet below the surface, any human eye can discover this is Mr. at which point the water still retains its Heller who has just gone into the basket, but in the same instant, almost before the depth of 22 feet is reached, and here the cover is down, Mr. Heller makes his appearance in ordinary evening costume at rocks on the bottom become visible, and the entrance of the theatre, and walks down | the motions of the huge fish can plainly be the aisle, inquiring what was being done followed. On the lowest floor the visitor with him. He immediately ascends the will be able to see the interior of the subplatform, opens the basket, and nobody is within. The question is still an open one, "How did Mr. Heller cease to be the corals, and other inhabitants of the ocean

M. Toselli will occasionally wreck a small vessel loaded with ten tons or so of stone, allow her to sink and then will raise her The Jacksonville Union of February 15, again by a new automatic apparatus which says: Notwithstanding the immense number of alligators which have been killed also be carried down in the submarime
